Commercial Buildings

with COLD FORMED steel

Why choose a COLD FORMED steel commercial building

COLD FORMED steel buildings are built to last. They stand the test of time, setting you and your commercial business up for success. These buildings will be:

- **Adaptable,** with a range of designs, sizes and customizability available, there are buildings to fit businesses of all types, sizes and styles.
- **Durable**, able to endure fire, wind, floods/water exposure, termites, mold etc. They will protect you and your business. Built with high structural integrity, options such as clear span interiors and mezzanines offer strength, capability and flexible design options.
- **Reliable,** they have a longer lifespan than both wood or tube-frame buildings and are low maintenance compared to wood-frame or shingle buildings, that means less unexpected repairs, less stress and less work. Now you have more time to spend on your business.
- **Quick**, these buildings are easy and quick to install making their turnover time shorter. Along with the fact components can be on-site within 2–4 weeks of placing an order, that also makes these buildings...
- **Cost-effective,** especially compared to red iron, COLD FORMED is lighter and uses fewer components which reduces equipment needed to install and freight costs. 30–40% can be saved on foundation costs as well as less experienced workers required to erect these buildings.
